

Guide Notes for ITE 307 Performance Task 8

Performance Task: Analyzing Social Network Data for Your Final Collab Projects

Instructions:

Collect social network data (e.g., Facebook posts, tweets, Reddit threads, YouTube comments, or TikTok discussions) related to each project's topic or problem.

Identify at least three public social network sources that talk about the topic of your project or a similar app/system idea. **Your goal is to understand what people think or feel (sentiments) about the problem your project wants to solve.**

Write your answers clearly and cite where your data came from (e.g., hashtags, post links, screenshots).

1. What is your team's proposed final project about, and what problem does it aim to solve?

• Guide:

- Write a short description of your system or app.
- Explain what real-world problem your project tries to address.
- Example: Our project is a waste-sorting app that helps barangays track recyclable waste.

ANSWER:

CMMS-A cemetery management system that digitizes burial records and provides an interactive map for grave locations. It solves issues related to manual records, lost documentation, and difficulty locating graves.

FloodEye-A data mining system that analyzes past flood data to identify patterns and predict potential flood risks. It aims to improve disaster preparedness and response.

EvacuDesk-is a web-based system that digitizes evacuation center operations to solve issues like slow registration and poor coordination during disasters.

SkillMatch-A secure, online voting system for organizations and communities with fraud detection and real-time monitoring.

VoteSmart-is a proposed web-based voting application that provides a secure, efficient, and transparent platform for various election scenarios such as school, organizational, and community elections. The project aims to minimize voting fraud, improve accessibility, and simplify the election process for both administrators and voters.

WorkConnect- It is a job finding and employee hunting platform aimed to make job hunting easier for new grads and experienced veterans to find jobs and for employers to find new upcoming talent or old dogs with multiple tricks up their sleeve.

OpenPC One- A web-based computer monitoring and management system for IT administrators. It tracks and manages computer units in real-time, solving the problem of inefficient manual monitoring, delayed maintenance, and system issues in computer labs or organizations.

2. What social network platforms did your team explore to find data or posts about your project topic?

- Guide:

- Identify at least three platforms (e.g., Facebook, Twitter/X, TikTok, Reddit, YouTube).
- Choose public posts related to your project's topic or similar systems.
- Example: We collected 25 tweets using #wastemanagement and 10 Facebook comments on a government recycling page.

CMMS – We looked at public Facebook posts from local government units in Pangasinan and cemetery/memorial park pages where people comment about grave visits and cemetery conditions.

FloodEye – Twitter/X posts under #floodalert, Reddit threads on flood mapping, YouTube videos from weather agencies and LGUs.

EvacuDesk – We used **Facebook, X (Twitter), and TikTok** to find posts about disaster response and evacuation management.

SkillMatch – LinkedIn's main mechanics is the main inspiration for our web application.

VoteSmart –Our team explored Facebook to gather opinions and discussions about online voting systems, election transparency, and concerns related to the security and accessibility of digital voting platforms.

WorkConnect – LinkedIn posts, Fiverr mechanics, and facebook hiring posts.

OpenPC One – Reddit tech threads on PC lab management, Facebook IT groups discussing lab maintenance tools, YouTube tutorials on system monitoring tools like Nagios or Lansweeper.

3. What keywords, hashtags, or phrases did you use to collect data from social media?

- Guide:

- List the exact keywords, hashtags, or topics you searched for.
- Example: #DigitalLearning #EwalletPH #WasteSegregation #OnlineClinicApp.
- Explain why these keywords match your project's topic.

CMMS – #DigitalCemetery #BurialRecordsPH #GraveLocator

FloodEye – #FloodRisk #FloodPredictionPH #DisasterData

EvacuDesk – #RescuePH, #ReliefOperations, #DisasterPreparedness “evacuation center”

SkillMatch – The keywords and hashtags we used include #OnlineVoting, #SecureElections, #digitalVotingSystem, and #VotingApp.

VoteSmart – #OnlineVotingPH #SecureVoting #VoteSmart2025

WorkConnect – #JobHuntPH #FreshGradJobs #HiringTalents

OpenPC One – #ITAdminTools #PCMonitoring #ComputerLabPH

These keywords were selected to align with the concerns and services relevant to each project's goals.

4. What types of posts or discussions did you find about your topic?

• Guide:

- Describe the general tone or kind of posts you found (e.g., complaints, praises, suggestions, discussions).

- Example: Most users complained about the lack of easy-to-use waste apps; some shared DIY recycling hacks.

CMMS – Complaints and concerns about cemetery conditions in Pangasinan for example flooding and the difficulty for the families in locating graves.

FloodEye – Positive posts about the need for better flood data, stories of unpreparedness, and calls for better early warning systems.

EvacuDesk – Found posts about relief efforts, evacuation updates, and complaints on disorganized centers and slow aid.

SkillMatch – Helpful tips and user posts about struggles in job readiness due to lack of practical skills. Also, suggestions for a skill that needs to be enhanced more.

VoteSmart – we found posts discussing students and organizations interest in digital voting systems, concerns about data privacy, and opinions highlighting the convenience and time efficiency of online elections compared to manual methods.

WorkConnect – Discussions on difficulties with current job platforms and desire for more verified postings.

OpenPC One – Posts by IT admins discussing their struggles with manual lab inspections, tool recommendations, and system monitoring concerns.

5. What is the overall sentiment of the posts you gathered?

- Guide:

- Categorize the posts as positive, negative, or neutral.
- Example: Out of 30 comments, 18 were positive, 8 were neutral, and 4 were negative about using digital waste tracking.
- Mention what emotions or opinions people expressed.

CMMS – 70% negative, 30% neutral – mostly due to frustrations over outdated cemetery systems.

FloodEye – 80% positive, 20% neutral – users welcome data-driven approaches to disaster prediction.

EvacuDesk – 50% positive, 30% neutral, 20% negative – Mostly concerned and frustrated, but supportive of using technology to improve response.

SkillMatch – 85% positive, 15% neutral – strong interest in skill development and educational tools.

VoteSmart – 60% positive, 30% neutral, 10% negative – concerns about digital security were frequently raised.

WorkConnect – 75% positive, 15% neutral, 10% negative – most were optimistic, some shared bad experiences on unverified job sites.

OpenPC One – 80% positive, 20% neutral – IT professionals appreciated automation in lab monitoring, though some wanted more customizable dashboards.

6. What specific concerns, needs, or feedback do people express about your project's problem or related apps?

- Guide:

- Write the common themes or issues you found in the posts.
- Example: Many users want apps that use less data; some fear privacy issues.
- Relate the findings to how your app can help solve these concerns.

CMMS – Need for searchable databases, easier grave location, and backup systems for records.

FloodEye – Users asked for real-time maps, alerts via mobile, and integration with barangay disaster plans.

EvacuDesk – Issues included overcrowding, lack of updates, and poor tracking of requests and donations.

SkillMatch – Respondents asked for career paths, progress tracking, and learning courses for a specific skill.

VoteSmart – Common requests included voter authentication, audit trails, and offline voting fallback.

WorkConnect – Users wanted smart filtering, application status tracking, and privacy protection.

OpenPC One – People wanted automated status updates, maintenance reminders, real-time dashboards, and security features for remote labs.

7. What tools or methods did you use to collect or analyze the social network data?

• Guide:

- Mention if you used Google search, hashtags, keyword trackers, or any software like NodeXL, Gephi, or Excel.

- Example: We used Excel to count and categorize posts as positive or negative.

We used:

- **Google search** with advanced filters
- **Hashtag searches** on Facebook, Reddit, TikTok, and Twitter/X
- Data organized in **Excel**
- Posts were categorized by topic and sentiment (positive, neutral, negative)

8. How do the sentiments you found affect or influence your project proposal?

• Guide:

- Explain if the online feedback makes you want to change or keep certain features.

- Example: Because many users worry about data use, we plan to add an offline mode to our app.

CMMS – We prioritized features like advanced grave search, record backup, and grave locator maps based on user frustrations.

FloodEye – We added a mobile alert feature and heatmap visualizations due to requests for timely data.

EvacuDesk – Feedback confirmed the need for EvacuDesk, guiding us to focus on efficiency, transparency, and user-friendly design.

SkillMatch – We added the feature “career path” because our respondents say that it will be more likely to be aligned in our project title.

VoteSmart –The Social media sentiments influenced us to prioritize fraud detection, transparency, and user-friendly design in votesmart to ensure that users can trust and easily navigate the platform.

WorkConnect – Based on the information gathered, we adjusted our security to better suit both parties with increased security and fraud prevention.

OpenPC One – The need for real-time monitoring and automation was reinforced, so we’re emphasizing maintenance alerts, dashboard customization, and reporting tools.

9. What ethical considerations did your team follow when collecting or using social network data?

• Guide:

- Mention that you only used publicly available posts and respected data privacy.
- Example: We did not collect personal user data or screenshots with names.

ANSWER:

We ensured that we only collected data from publicly available social media posts and discussions, without accessing private groups or accounts. We did not collect or store any personal information such as names, usernames, or profile pictures, and we made sure to anonymize any examples used in our analysis. All data was used strictly for academic purposes, in compliance with ethical standards related to privacy and responsible data handling.

10. How will your team present your findings and conclusions to the class?

• Guide:

- Describe your plan for presenting (e.g., infographic, PowerPoint, short video).
- Include visuals like charts, graphs, or word clouds to show your results.
- Each member should discuss one part of the analysis.

ANSWER:

Our team will present our findings through a PowerPoint presentation that includes a summary of each project, analysis of social media data, and visual aids such as bar graphs, pie charts, and word clouds to represent public sentiment. Each member will present the analysis related to their assigned project, ensuring that the data is clearly explained and supported by relevant visuals.
