 - Replace with GCR Profile Picture of Member 1234567 - Place numbers beside the names of previous presenters

😊 - Place beside the name of the current presenter (Do not write on the blue square yet)

**Signature** - have members affix their signatures below their names after stars have been allocated to the team members

**Instructions:**

 Fill out the items below. Write your answers in complete sentences in your own and cite the documents that you've used to support your answers. Attach related documents to support your presentation in separate sheets to this document.

**1. What are your proposed final collab projects about, and what problem do they aim to solve?**

**CMMS**-A cemetery management system that digitizes burial records and provides an interactive map for grave locations. It solves issues related to manual records, lost documentation, and difficulty locating graves.

**FloodEye**-A data mining system that analyzes past flood data to identify patterns and predict potential flood risks. It aims to improve disaster preparedness and response.

**EvacuDesk**-is a web-based system that digitizes evacuation center operations to solve issues like slow registration and poor coordination during disasters.

**SkillMatch**-A secure, online voting system for organizations and communities with fraud detection and real-time monitoring.

**VoteSmart**-is a proposed web-based voting application that provides a secure, efficient, and transparent platform for various election scenarios such as school, organizational, and community elections. The project aims to minimize voting fraud, improve accessibility, and simplify the election process for both administrators and voters.

**WorkConnect**- It is a job finding and employee hunting platform aimed to make job hunting easier for new grads and experienced veterans to find jobs and for employers to find new upcoming talent or old dogs with multiple tricks up their sleeve.

**OpenPC One**- A web-based computer monitoring and management system for IT administrators. It tracks and manages computer units in real-time, solving the problem of inefficient manual monitoring, delayed maintenance, and system issues in computer labs or organizations

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |  |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| <p><b>2. What social network platforms did your team explore to find data or posts about your project topic?</b></p> <p><b>CMMS</b> – We looked at public Facebook posts from local government units in Pangasinan and cemetery/memorial park pages where people comment about grave visits and cemetery conditions.</p> <p><b>FloodEye</b> – Twitter/X posts under #floodalert, Reddit threads on flood mapping, YouTube videos from weather agencies and LGUs.</p> <p><b>EvacuDesk</b> – We used <b>Facebook, X (Twitter), and TikTok</b> to find posts about disaster response and evacuation management.</p> <p><b>SkillMatch</b> – LinkedIn’s main mechanics are the main inspiration for our web application.</p> <p><b>VoteSmart</b> –Our team explored Facebook to gather opinions and discussions about online voting systems, election transparency, and concerns related to the security and accessibility of digital voting platforms.</p> <p><b>WorkConnect</b> – LinkedIn posts, Fiverr mechanics, and Facebook hiring posts.</p> <p><b>OpenPC One</b> – Reddit tech threads on PC lab management, Facebook IT groups discussing lab maintenance tools, YouTube tutorials on system monitoring tools like Nagios or Lansweeper.</p> |  |
| <p><b>3. What keywords, hashtags, or phrases did you use to collect data from social media? Give 3-5 per project title.</b></p> <p><b>CMMS</b> – #DigitalCemetery #BurialRecordsPH #GraveLocator</p> <p><b>FloodEye</b> – #FloodRisk #FloodPredictionPH #DisasterData</p> <p><b>EvacuDesk</b> – #RescuePH, #ReliefOperations, #DisasterPreparedness “evacuation center”</p> <p><b>SkillMatch</b> – The keywords and hashtags we used include #OnlineVoting, #SecureElections, #digitalVotingSystem, and #VotingApp.</p> <p><b>VoteSmart</b> – #OnlineVotingPH #SecureVoting #VoteSmart2025</p> <p><b>WorkConnect</b> – #JobHuntPH #FreshGradJobs #HiringTalents</p> <p><b>OpenPC One</b> – #ITAdminTools #PCMonitoring #ComputerLabPH</p> <p>These keywords were selected to align with the concerns and services relevant to each project’s goals.</p>                                                                                                                                                                                                                                                                                                                                                                                           |  |
| <p><b>4. What types of posts or discussions did you find about your topic?</b></p> <p><b>CMMS</b> – Complaints and concerns about cemetery conditions in Pangasinan, for example, flooding and the difficulty for the families in locating graves.</p> <p><b>FloodEye</b> – Positive posts about the need for better flood data, stories of unpreparedness, and calls for better early warning systems.</p> <p><b>EvacuDesk</b> –Found posts about relief efforts, evacuation updates, and complaints on disorganized centers and slow aid.</p> <p><b>SkillMatch</b> – Helpful tips and user posts about struggles in job readiness due to lack of practical skills.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
| <p><b>VoteSmart</b> – we found posts discussing students and organizations interest in digital voting systems, concerns about data privacy, and opinions highlighting the convenience and time efficiency of online elections compared to manual methods.</p> <p><b>WorkConnect</b> – Discussions on difficulties with current job platforms and desire for more verified postings.</p> <p><b>OpenPC One</b> – Posts by IT admins discussing their struggles with manual lab inspections, tool recommendations, and system monitoring concerns.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |  |
| <p><b>5. What is the overall sentiment of the posts you gathered?</b></p> <p><b>CMMS</b> – 70% negative, 30% neutral – mostly due to frustrations over outdated cemetery systems.</p> <p><b>FloodEye</b> – 80% positive, 20% neutral – users welcome data-driven approaches to disaster prediction.</p> <p><b>EvacuDesk</b> – 50% positive, 30% neutral, 20% negative – Mostly concerned and frustrated, but supportive of using technology to improve response.</p> <p><b>SkillMatch</b> – 85% positive, 15% neutral – strong interest in skill development and educational tools.</p> <p><b>VoteSmart</b> – 60% positive, 30% neutral, 10% negative – concerns about digital security were frequently raised.</p> <p><b>WorkConnect</b> – 75% positive, 15% neutral, 10% negative – most were optimistic, some shared bad experiences on unverified job sites.</p> <p><b>OpenPC One</b> – 80% positive, 20% neutral – IT professionals appreciated automation in lab monitoring, though some wanted more customizable dashboards.</p> |  |
| <p><b>6. What specific concerns, needs, or feedback do people express about your project's problem or related apps?</b></p> <p><b>CMMS</b> – Need for searchable databases, easier grave location, and backup systems for records.</p> <p><b>FloodEye</b> – Users asked for real-time maps, alerts via mobile, and integration with barangay disaster plans.</p> <p><b>EvacuDesk</b> – Issues included overcrowding, lack of updates, and poor tracking of requests and donations.</p> <p><b>SkillMatch</b> – Respondents asked for certification paths, progress tracking, and teacher-student collaboration tools.</p> <p><b>VoteSmart</b> – Common requests included voter authentication, audit trails, and offline voting fallback.</p>                                                                                                                                                                                                                                                                                            |  |

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |

| <p><b>WorkConnect</b> – Users wanted smart filtering, application status tracking, and privacy protection.</p> <p><b>OpenPC One</b> – People wanted automated status updates, maintenance reminders, real-time dashboards, and security features for remote labs.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
| <p><b>7. What tools or methods did you use to collect or analyze the social network data?</b></p> <ul style="list-style-type: none"> <li>● <b>Google search</b> with advanced filters</li> <li>● <b>Hashtag searches</b> on Facebook, Reddit, TikTok, and Twitter/X</li> <li>● Data organized in <b>Excel</b></li> <li>● Posts were categorized by topic and sentiment (positive, neutral, negative)</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |  |
| <p><b>8. How do the sentiments you found affect or influence your project proposal?</b></p> <ul style="list-style-type: none"> <li>● <b>CMMS</b> – We prioritized features like advanced grave search, record backup, and grave locator maps based on user frustrations.</li> <li>● <b>FloodEye</b> – We added a mobile alert feature and heatmap visualizations due to requests for timely data.</li> <li>● <b>EvacuDesk</b> – Feedback confirmed the need for EvacuDesk, guiding us to focus on efficiency, transparency, and user-friendly design.</li> <li>● <b>SkillMatch</b> – We included mentor-matching and certifications due to user demand for structured improvement.</li> <li>● <b>VoteSmart</b> – The Social media sentiments influenced us to prioritize fraud detection, transparency, and user-friendly design in VoteSmart to ensure that users can trust and easily navigate the platform.</li> <li>● <b>WorkConnect</b> – Based on the information gathered, we adjusted our security to better suit both parties with increased security and fraud prevention.</li> <li>● <b>OpenPC One</b> – The need for real-time monitoring and automation was reinforced, so we’re emphasizing maintenance alerts, dashboard customization, and reporting tools.</li> </ul> |  |
| <p><b>9. What ethical considerations did your team follow when collecting or using social network data?</b></p> <p>We ensured that we only collected data from publicly available social media posts and discussions, without accessing private groups or accounts. We did not collect or store any personal information, such as names, usernames, or profile pictures, and we made sure to anonymize any examples used in our analysis. All data was used strictly for academic purposes, in compliance with ethical standards related to privacy and responsible data handling.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |  |
| <p><b>10. How will your team present your findings and conclusions to the class?</b></p> <p>Our team will present our findings through a PowerPoint presentation that includes a summary of each project and an analysis of social media data to represent public sentiment. Each member will present the study related to their assigned project, ensuring that the data is clearly explained and supported by relevant visuals.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |  |
